PROFILE

Full-stack, mobile and cloud engineer who designs, builds and scales products end to end: **React, Next.js and React Native** apps, **Java 21 / Spring Boot 3** services, and **AWS** infrastructure running on **Docker and Kubernetes** with automated CI/CD. I start from the system design (caching, queues, idempotency, isolation, failure modes) and write the decisions down before the code, so clients know what they are getting, why, and what it will cost to run.

WHAT I DELIVER

- **Websites & mobile apps** for small businesses and personal brands: fast, mobile-first sites, React Native apps for iOS and Android, and low-cost care plans.
- **Startup MVPs** for busy founders, taken from idea to production on AWS and built to grow rather than be rewritten.
- **Scale, cloud & CI/CD**: load-test-driven performance fixes, EKS via Terraform and Helm, GitOps with Argo CD and canary releases.
- **AI features**: permission-aware RAG and document Q&A with citations, cost controls and evals.

EXPERIENCE

Tata Consultancy Services

AUG 2024 – PRESENT

Software Engineer, Java Backend · Hyderabad · Enterprise HRMS & finance microservices

- Build and enhance **Spring Boot 3 microservices on Java 21** for payroll, workforce and finance workflows, with REST APIs and Spring Data JPA over PostgreSQL and SQL Server.
- Secured employee, HR and admin endpoints with **Spring Security, JWT and role-based access control**.
- Added **asynchronous event processing** and **Redis caching** for high-frequency payroll and attendance lookups.
- Integrated **Spring AI** into existing services for document and policy Q&A, with access control applied to retrieved context.
- Production debugging and API / database issue resolution across backend services in Agile delivery.

SEE IT LIVE

MAIN-HUB-MU.VERCEL.APP

SYSTEMS LAB
Interactive scaling model: traffic, autoscaling, caching, queues and replicas, with the bottleneck explained.

6 ARCHITECTURES
Clickable diagrams with live request traces, scaling stages, decisions and failure modes.

SHOWCASE
Sample websites and matching mobile apps for small businesses, with clear starting prices.

EXPERTISE

SYSTEM DESIGN
Scalability, caching, queues, idempotency, multi-tenancy, event-driven design, consistency, capacity planning

BACK END
Java 21, Spring Boot 3, Spring Security (JWT, OAuth2, RBAC), REST, WebSockets, microservices

WEB & MOBILE
React, Next.js, React Native (Expo), TypeScript, Tailwind CSS, SEO

DATA
PostgreSQL / Aurora, Redis, DynamoDB, pgvector, SQL Server

AWS
EKS, EC2, Lambda, RDS, S3, CloudFront, SQS, SNS, IAM, Secrets Manager, CloudWatch

PLATFORM
Docker, Kubernetes, Helm, Terraform, Argo CD, GitHub Actions, OpenTelemetry

AI INTEGRATION
Spring AI, RAG, embeddings, vector search, LLM APIs, structured outputs

HOW I WORK

1 · Discovery call
Product, users, pain, deadline.

2 · Design doc & fixed quote
Diagrams, decisions, trade-offs.

3 · Weekly sprints
Working demo on staging every week.

4 · Launch
Load-tested, monitored, rollback rehearsed.

5 · Handover
Runbooks; you own the repo and AWS account.

SYSTEM DESIGN CASE STUDIES

REFERENCE ARCHITECTURES

Designs I offer clients, each with an interactive diagram on the portfolio.

SWIFTCART FLASH

FLASH-SALE COMMERCE

Waiting room for spikes; atomic Redis inventory with timed holds so nothing oversells; idempotent checkout; pre-scaling and k6 rehearsals.

LEDGERLINE

PAYMENTS & LEDGER

Double-entry, append-only journal; serializable transfers; idempotency keys end to end; transactional outbox; daily reconciliation.

ROUTELIVE

REAL-TIME TRACKING & DISPATCH

Rider-partitioned location stream; Redis GEO dispatch; stateless WebSocket gateways with pub/sub fan-out; PostGIS history.

DOCMIND

PERMISSION-AWARE RAG

Permission filter inside the vector query; cite-or-decline answers; semantic cache; per-team token budgets; evals gate prompt changes in CI.

OPEN SOURCE & PROJECTS

Project 1 · TenantForge — Multi-tenant B2B SaaS platform

2026

OPEN SOURCE

Java 21 · Spring Boot 3 · Next.js · PostgreSQL / Aurora · Redis · SQS · S3 · Keycloak · Stripe · EKS · KEDA · Terraform · Argo CD · github.com/ARGOD2213/tenantforge

- Tenant isolation enforced by **Postgres Row-Level Security** (FORCE RLS, non-owner role); **pool-then-silo** tenancy routed by a tenant catalog, migrations per database.
- **Per-tenant rate limits** in Redis (429 + Retry-After); Keycloak SSO with tenant/role claims and per-tenant OIDC/SAML; **idempotent Stripe webhooks**.
- **SQS exports on KEDA-scaled workers**, S3 per-tenant prefixes with KMS; Terraform for EKS and Aurora; 34 Testcontainers tests in CI.

ARGUS — Event-driven industrial IoT monitoring platform

8 SPRINTS

OPEN SOURCE

Java 17 · Spring Boot 3.2 · AWS Lambda · SQS FIFO · SNS · DynamoDB · S3 · Athena · Python · github.com/ARGOD2213/ARGUS

- Always-on **Lambda rule engine** fed by SQS FIFO; CRITICAL / WARNING alerts through SNS, stored in DynamoDB with evidence.
- **Permit-to-Work** state machine, evidence export, shift handover, nine dashboards; a local **predictive ensemble** advises only.
- Architecture locked by **ADRs**: no write path to plant equipment, Athena + S3 for history, edge agent with offline rules; no ECS, ALB or NAT to keep cost lean.

PolicyDocs RAG Service

2025 – PRESENT

Spring Boot 3 · Spring AI · Java 21 · PostgreSQL + pgvector · Redis · Docker · AWS

- Ingestion, chunking, embeddings and **RAG Q&A** over policy documents with structured outputs; **pgvector** retrieval.
- JWT and RBAC constrain retrieval; grounded answers only; Docker on AWS EC2.

Digital Library Platform

2025 – PRESENT

Spring Boot 3 · Java 21 · React · PostgreSQL · Redis · S3 · SES/SNS · Docker · AWS

- REST APIs with Spring Data JPA and **Flyway**; role-based workflows for readers, vendors and admins; JWT, **Redis caching**, S3 files, SES/SNS.
- Docker Compose on AWS EC2, deployed by **GitHub Actions CI/CD**.

STANDARDS

Infrastructure as code — Terraform for every AWS resource; separate staging and production.

Delivery — CI on every PR, image and dependency scanning, GitOps with Argo CD, canary or blue-green releases.

Observability — OpenTelemetry traces, Grafana or CloudWatch dashboards, alerts on SLOs.

Security — least-privilege IAM roles, Secrets Manager, OWASP checks, encryption at rest and in transit.

Quality — unit and Testcontainers integration tests, k6 load test before launch, OpenAPI docs.

Ownership — your GitHub and AWS accounts, ADRs, runbooks for every alert.

ENGAGEMENTS

Fixed scope

Clear deliverables, fixed quote, paid by milestone.

Sprint based

Two-week sprints, demo at the end of each.

Retainer

Reserved monthly hours as a fractional backend engineer.
